Field Maps: Overview

Field maps are used to relate fields on two different objects. Field maps are used for two major purposes:

Field Maps: Overview

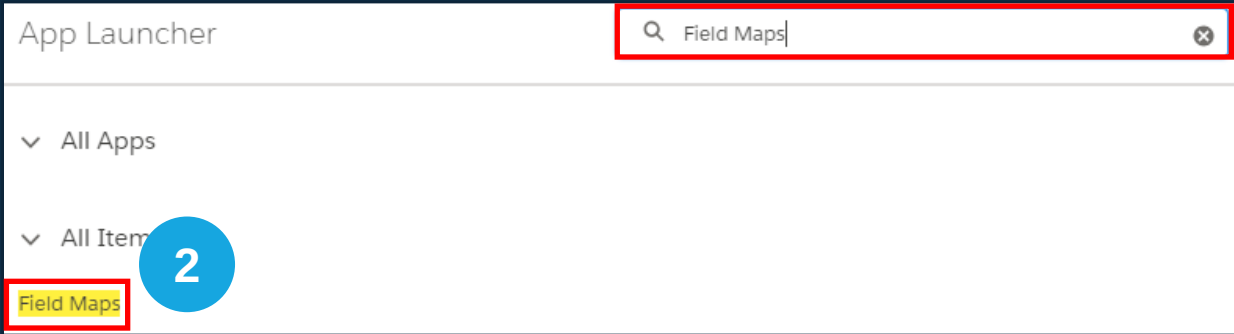

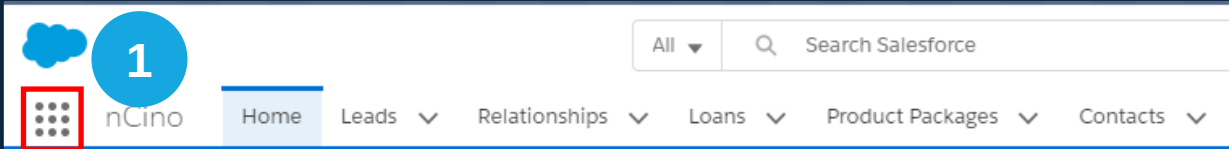

Field maps are used to relate fields on two different objects. Most commonly to push info from Opportunity or Lead to Deal Proposal:

Access Field Maps

Perform the following steps to access field maps:

Click the **App Launcher** icon.

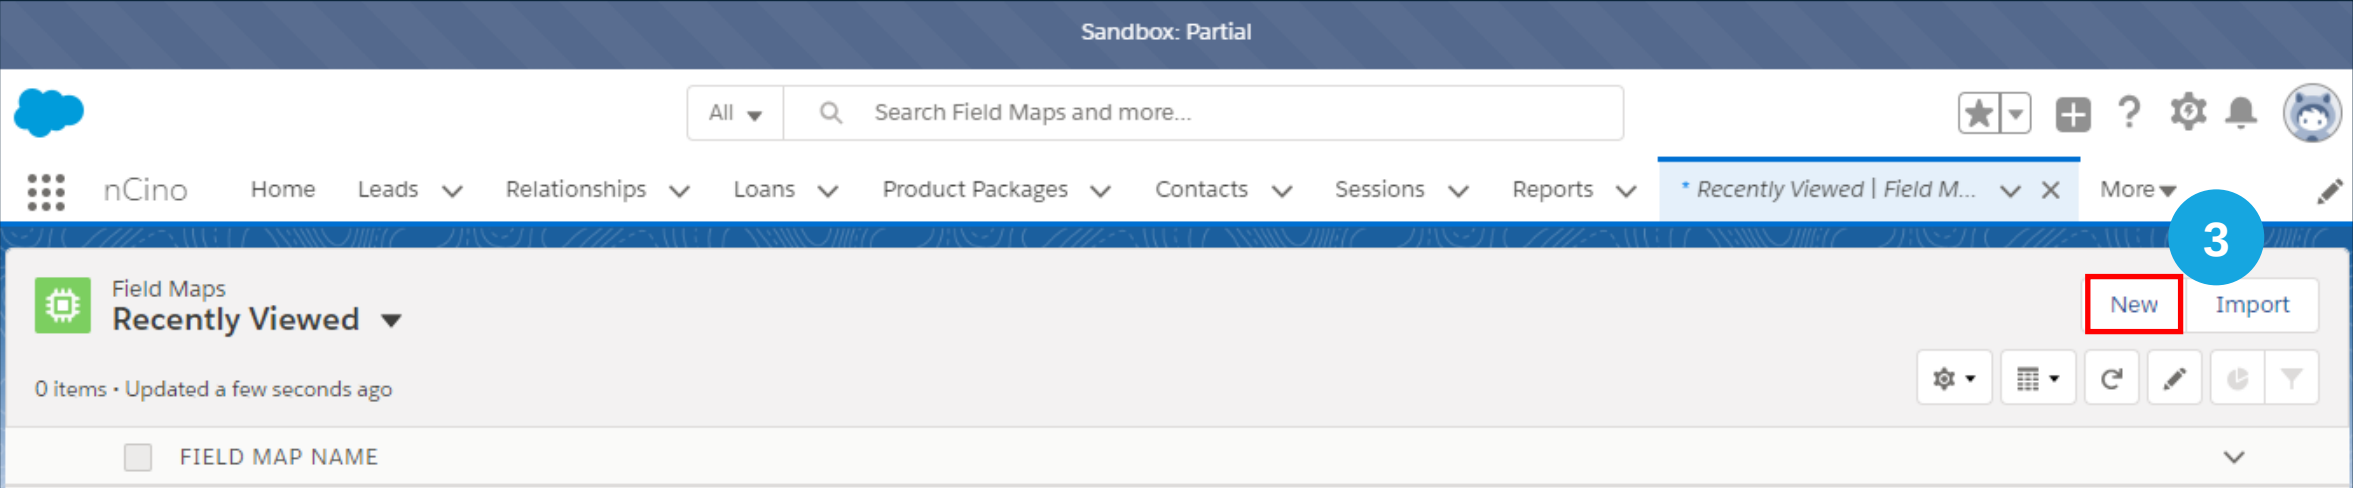

2 Enter **Field Maps** in the **Search** bar and press the **Enter** key. Then, click the **Field Maps** link.

Access Field Maps

Perform the following steps to access field maps:

Click the **New** button.

Access Field Maps

Perform the following steps to access field maps:

In the **New Field Map** pop-up window, enter the highlighted fields and then, click the **Save** button.

Field Maps & Opportunity Conversion

Exercise

Create an nCino Field Map

Step 1: Click on the Salesforce Application Launcher.

Step 2: Enter Field Maps in the search bar and select Field Maps under All Items.

Step 3: Click New to create a new nCino Field Map.

Step 4: Enter the following details and click Save.

Field Map Name: Opportunity Competitor

Originating Obj: Opportunity

Originating Obj Field: LLC_BI_Competitor__c

Target Obj: LLC_BI_Loan__c

Target Obj Field: Competitor__c

Move all Relationship Types to Chosen.

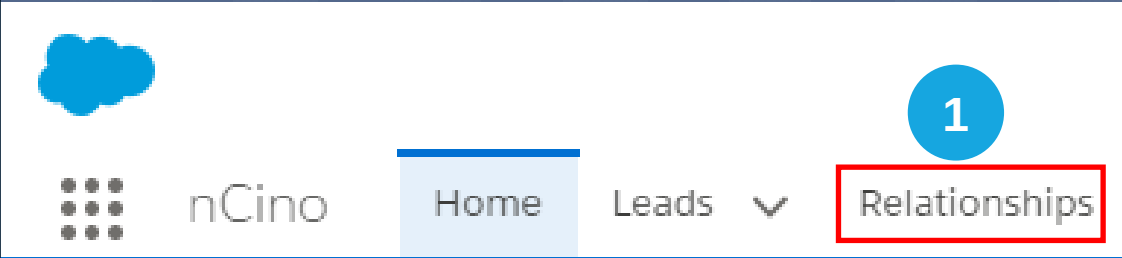

Duration: 5 minutes

Create a Loan from a Relationship

It is possible to create a loan from a relationship (say, an existing customer). Perform the following steps to create a loan:

Click the **Relationships** menu.

A screenshot of the Relationships Recently Viewed table. The table has a header with 'RELATIONSHIP NAME' and 'PHONE'. Below the header is a list of five items. The first item is 'AB Client'. The second item is 'ABC Household'. The third item is 'ABC Household'. The fourth item is 'XYZ Household'. The fifth item is 'Coastal Wave Company, Inc.'. The 'Coastal Wave Company, Inc.' link is highlighted with a red rectangular box. A blue circle with the number 2 is positioned to the right of the 'ABC Household' link.

	RELATIONSHIP NAME	PHONE
1	AB Client	
2	ABC Household	
3	ABC Household	
4	XYZ Household	
5	Coastal Wave Company, Inc.	

2 ➤ Click the desired relationship link.

Create a Loan from a Relationship

Perform the following steps to create a loan:

Click the **PRODUCTS AND SERVICES** tab. Then, click the **NEW LOAN PRODUCT** tab.

type

Page layouts

Document Manager
placeholders

Loan creation from a
relationship

Integration to the
bank's core system

Mortgage Servicing

Pricing/Product
Selection/Offer

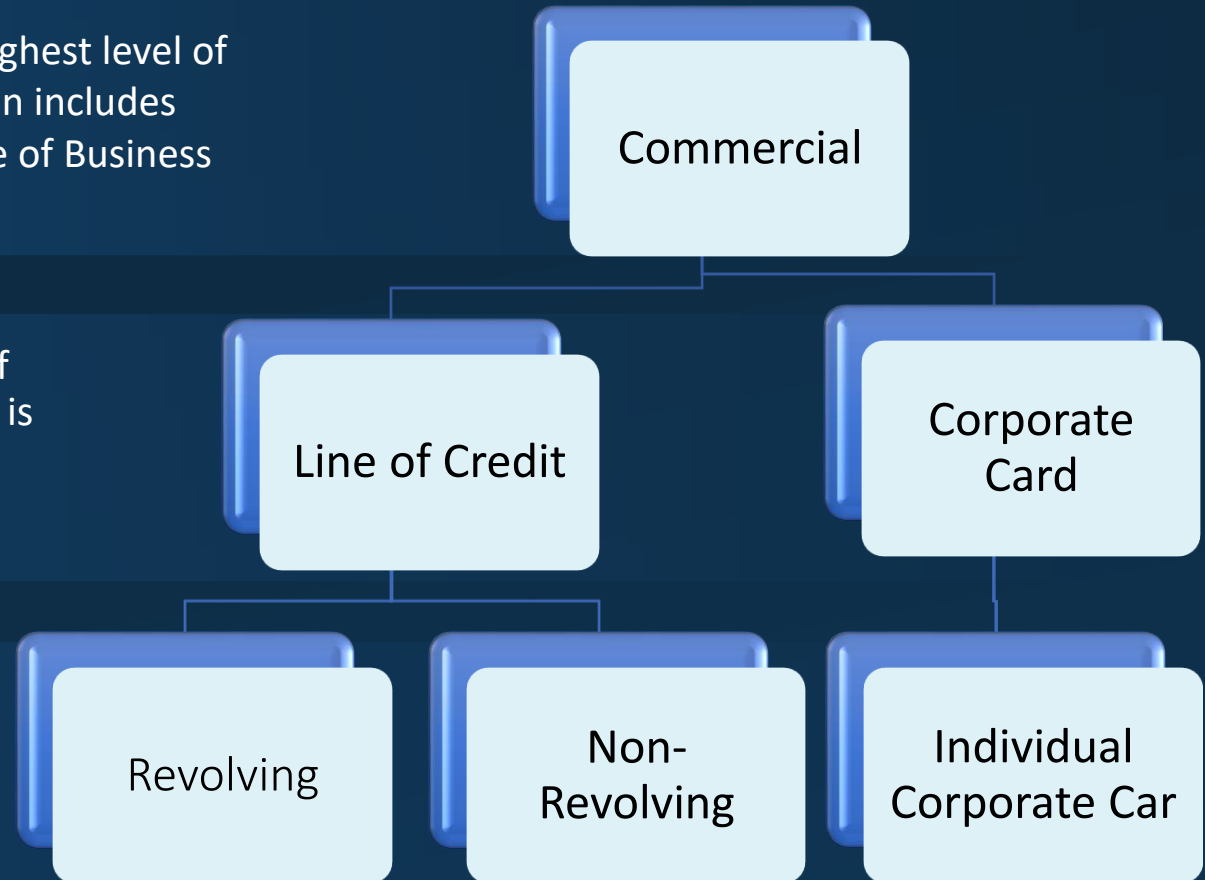

Impacts of Product Catalog in nCino

Product Line is the highest level of categorization. It often includes categorization by Line of Business (LOB).

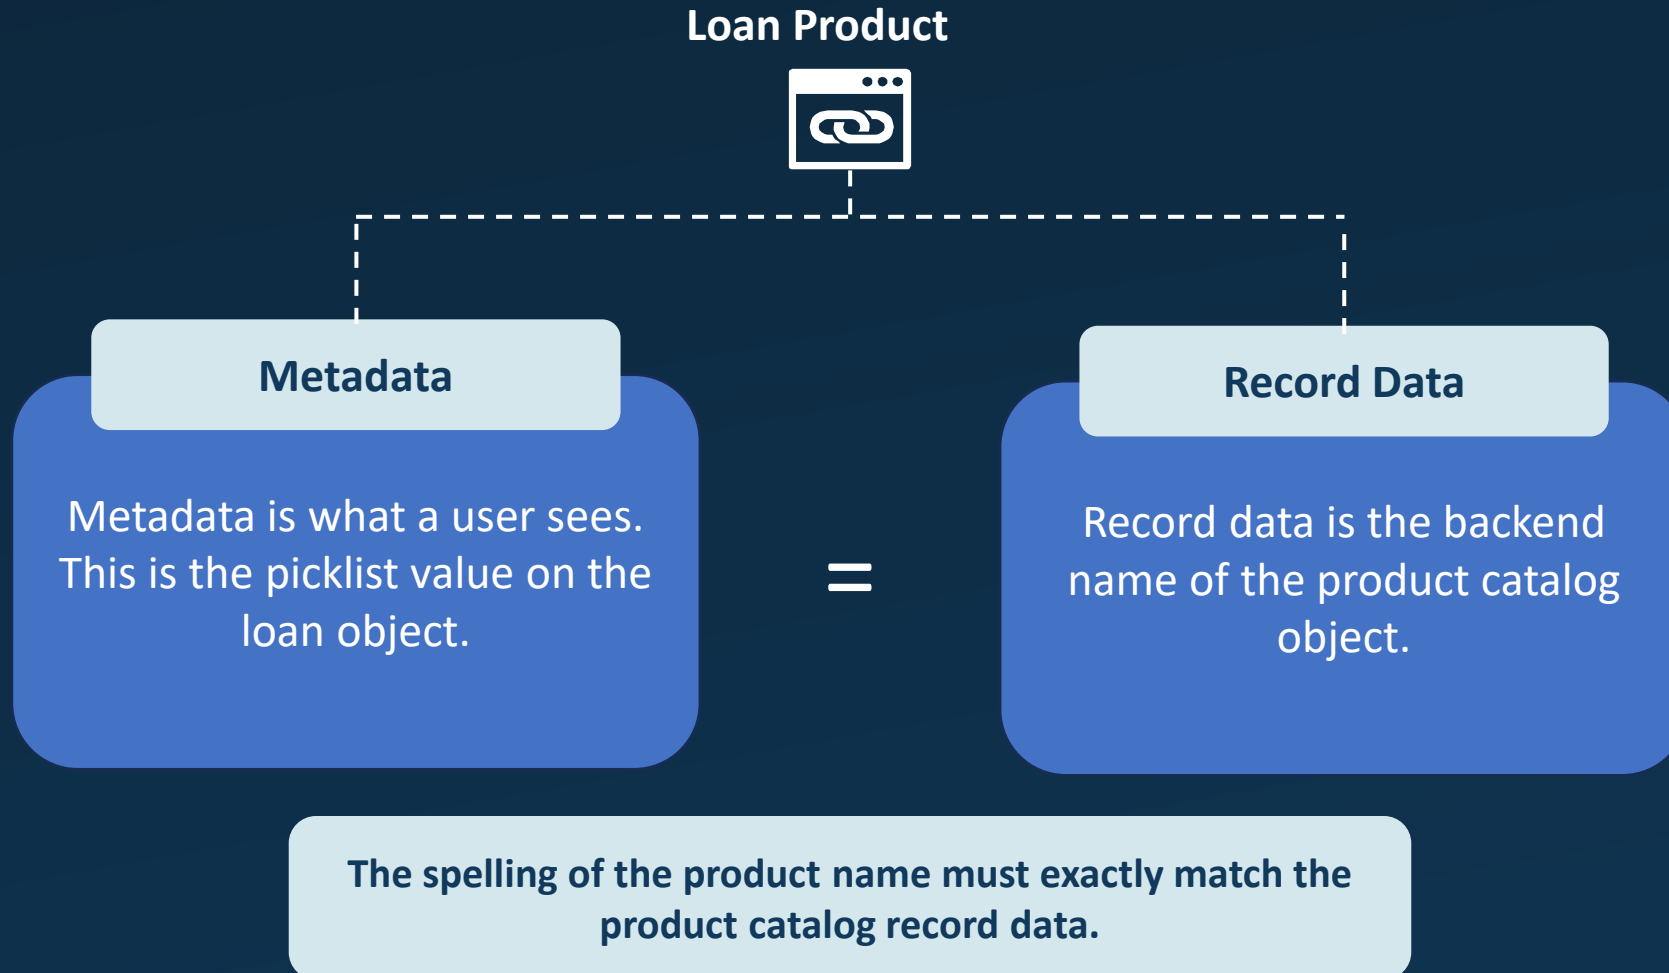

Product Type is the middle level of categorization. This categorization is often used to drive conditional rendering.

Product is the lowest level of categorization. The metadata aspects of the actual product are defined at this level.

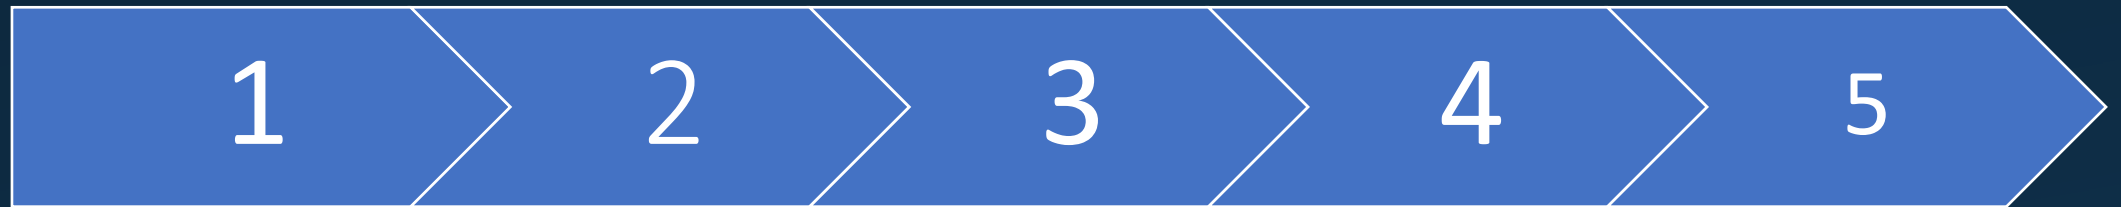

Product Data: Metadata and Record Data

Each product catalog value has two components, metadata and record data.

Configure the Product Catalog: High-Level Steps

Product catalog configuration must be completed in Salesforce Classic.

Access the
DM Admin
tool.

Click the
Products
tab

Add your
product
matrix.

Update the
loan picklist
values.

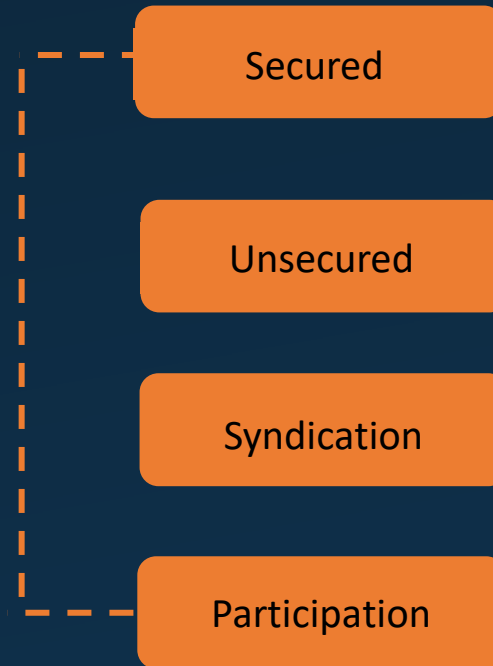

Add field
dependencies.

Product Features: Overview

Product features help to classify a product further by assigning additional attributes to it.

For example, by using product features, you can specify whether a product is:

The screenshot shows the 'New Product Feature' form in the nCino system. The form is divided into several sections: 'Information', 'Structure', 'Syndications and Participations', and 'Retail'. The 'Information' section includes fields for 'Product Feature Name', 'Owner' (set to 'Admin User'), 'Secured' (checkbox), 'Commercial' (checkbox), 'Create Applications' (checkbox), 'Exclude From Exposure' (checkbox), 'Purpose Code' (text field), and 'External Product Name' (text field). The 'Structure' section includes 'Is Term Loan' (checkbox), 'Is Current Takedown' (checkbox), 'Is Letter of Credit' (checkbox), and 'Is ELOC' (checkbox). The 'Syndications and Participations' section includes 'Allow Participation' (checkbox) and 'Allow Syndication' (checkbox). The 'Retail' section is partially visible at the bottom. At the bottom right of the form, there are three buttons: 'Cancel', 'Save & New', and 'Save'.

Note: Click the [How to Configure the nCino Product Catalog](#) link and access the Knowledge article to learn more.

Loan Origination Agenda

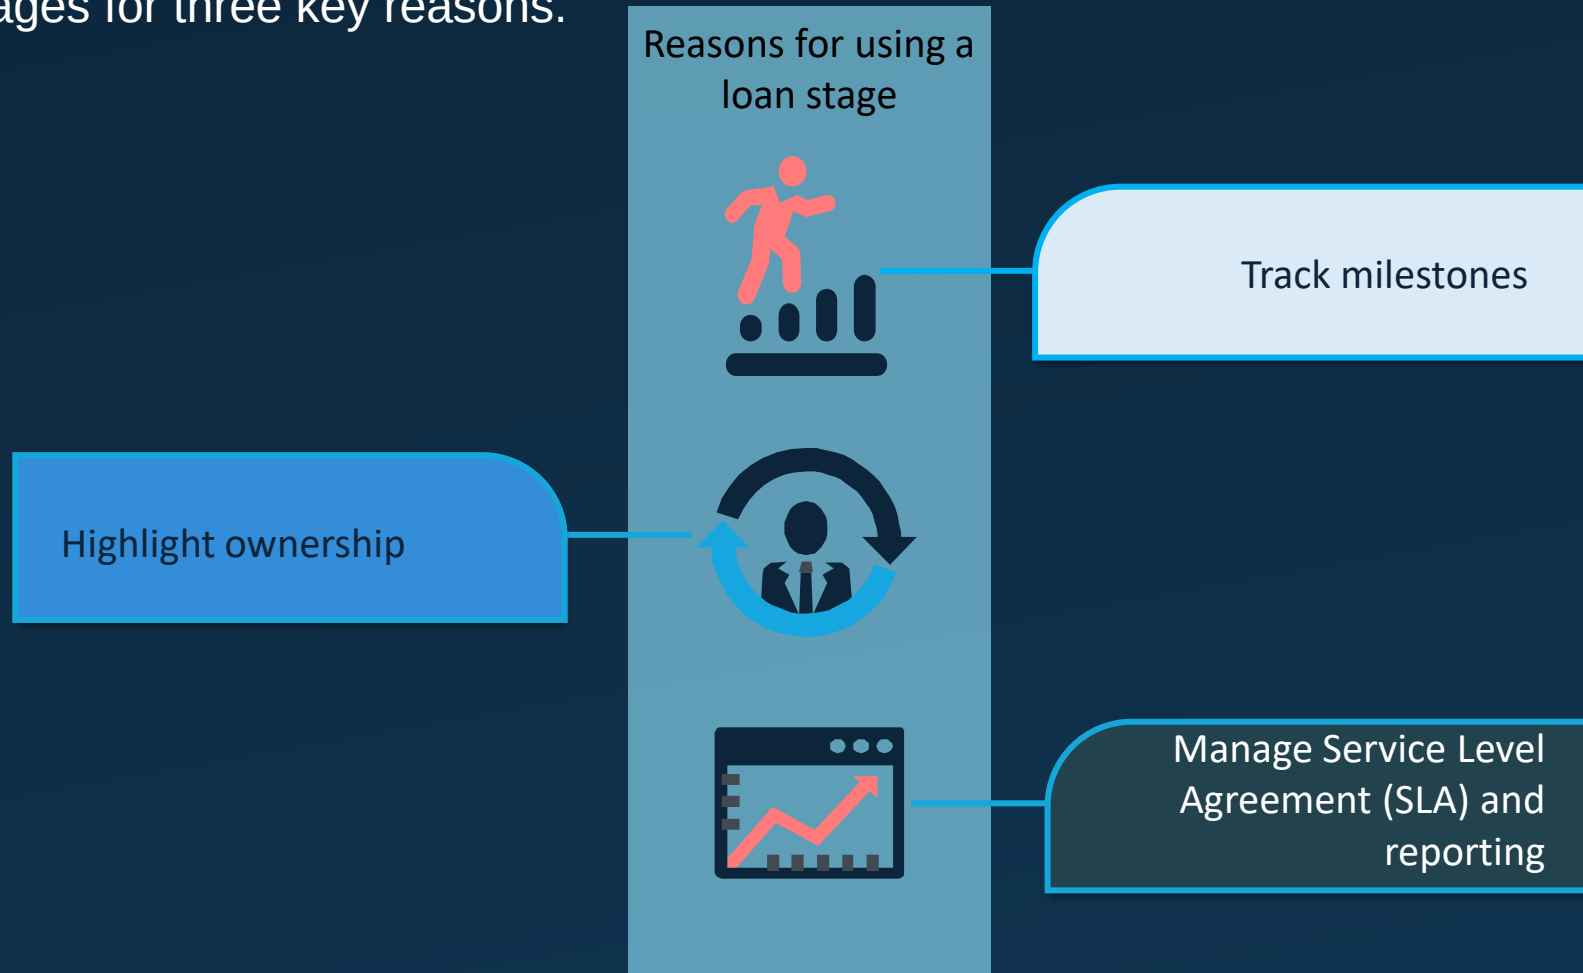

- 1 Overview of Loan Origination
- 2 Product Catalog
- 3 Stage and Status
- 4 Key Takeaways

Loan Stage: Overview

A loan stage is a representation of where the loan is in a financial institution's business process.

nCino uses loan stages for three key reasons.

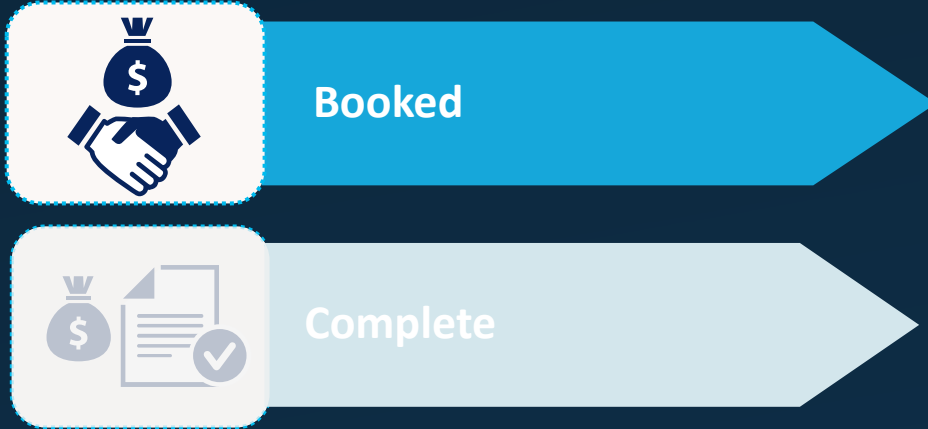

Example of Common nCino Stages

Stages with Special Meaning in nCino

There are two stages with special meaning in nCino.

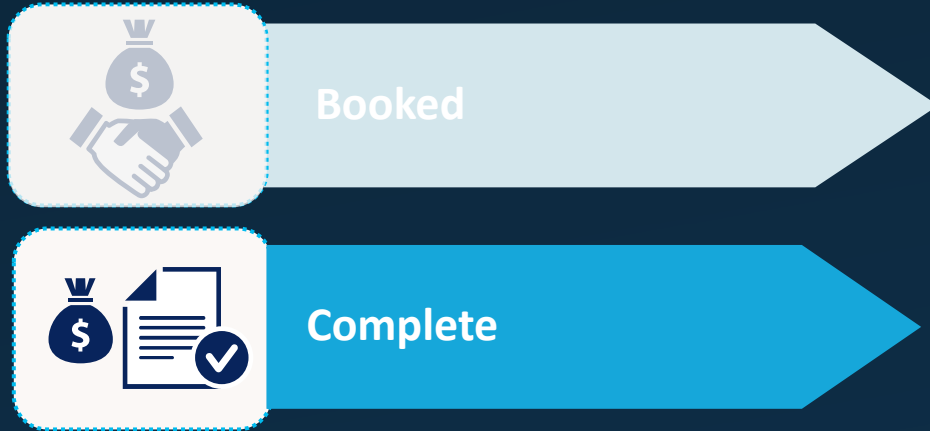

A loan can only be advanced to the Booked stage once it has been boarded to the financial institution's core system and nCino has the core system's unique ID (loan number).

Note: Click the [Gold Standard: nCino Loan Stages](#) link and access the Knowledge article to learn more.

Stages with Special Meaning in nCino

There are two stages with special meaning in nCino.

The purpose of the Complete stage is to flag loans that no longer require attention by any user or administrator at the financial institution.

Once the loan is marked as complete:

- It is no longer used in any relationship statistics.
- It no longer appears in reports for the active loan portfolio.

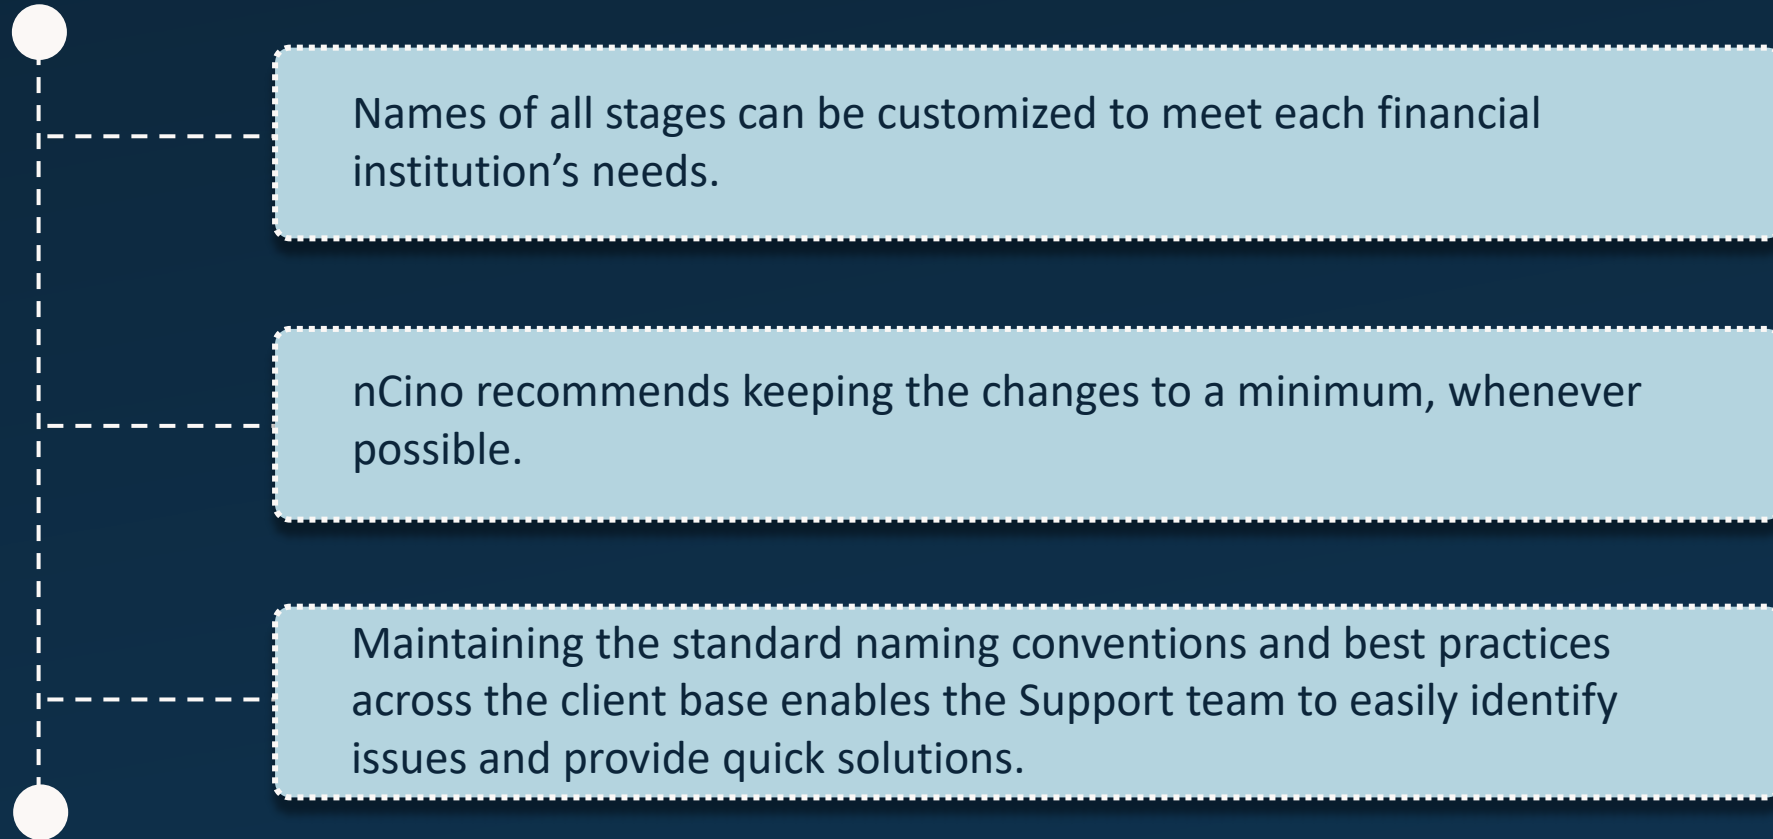

However, complete loan records are still available for future reference.

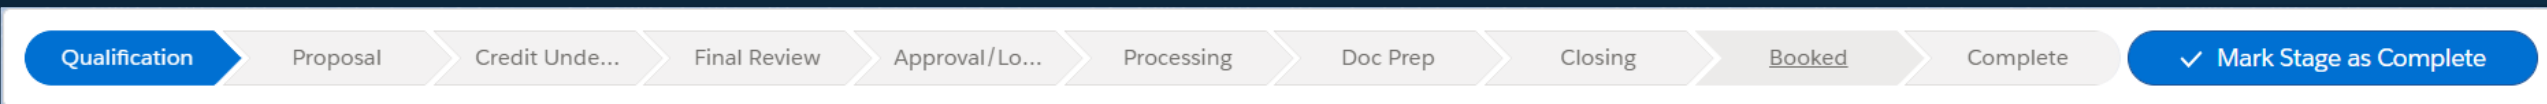

Note: Click the [Gold Standard: nCino Loan Stages](#) link and access the Knowledge article to learn more.

Naming the nCino Loan Stages

Keep in mind these parameters before naming the nCino loan stages.

Configuring Loan Stages: Moving from One Stage to the Next

There is a picklist field on the loan object and a Salesforce path (in Lightning) that allow you to manually set a loan stage. The best practice is to not enable manual stage change. Set the **Stage** field to read-only and disable the Salesforce path. Some financial institutions may allow a small group of users to manually change the stage.

The best practice recommended method of stage change:

- Use a separate checkbox for each stage in the loan lifecycle that requires the user to manually confirm that the loan is ready to move to the next stage.

Note: Checkboxes are preferred because they can be placed closer to other fields that may be required when a validation error appears.

Configuring Loan Stages: Moving from One Stage to the Next

Some financial institutions' policies allow a loan (application) to move to a previous stage. This can be handled in nCino with certain limitations and best practices in mind.

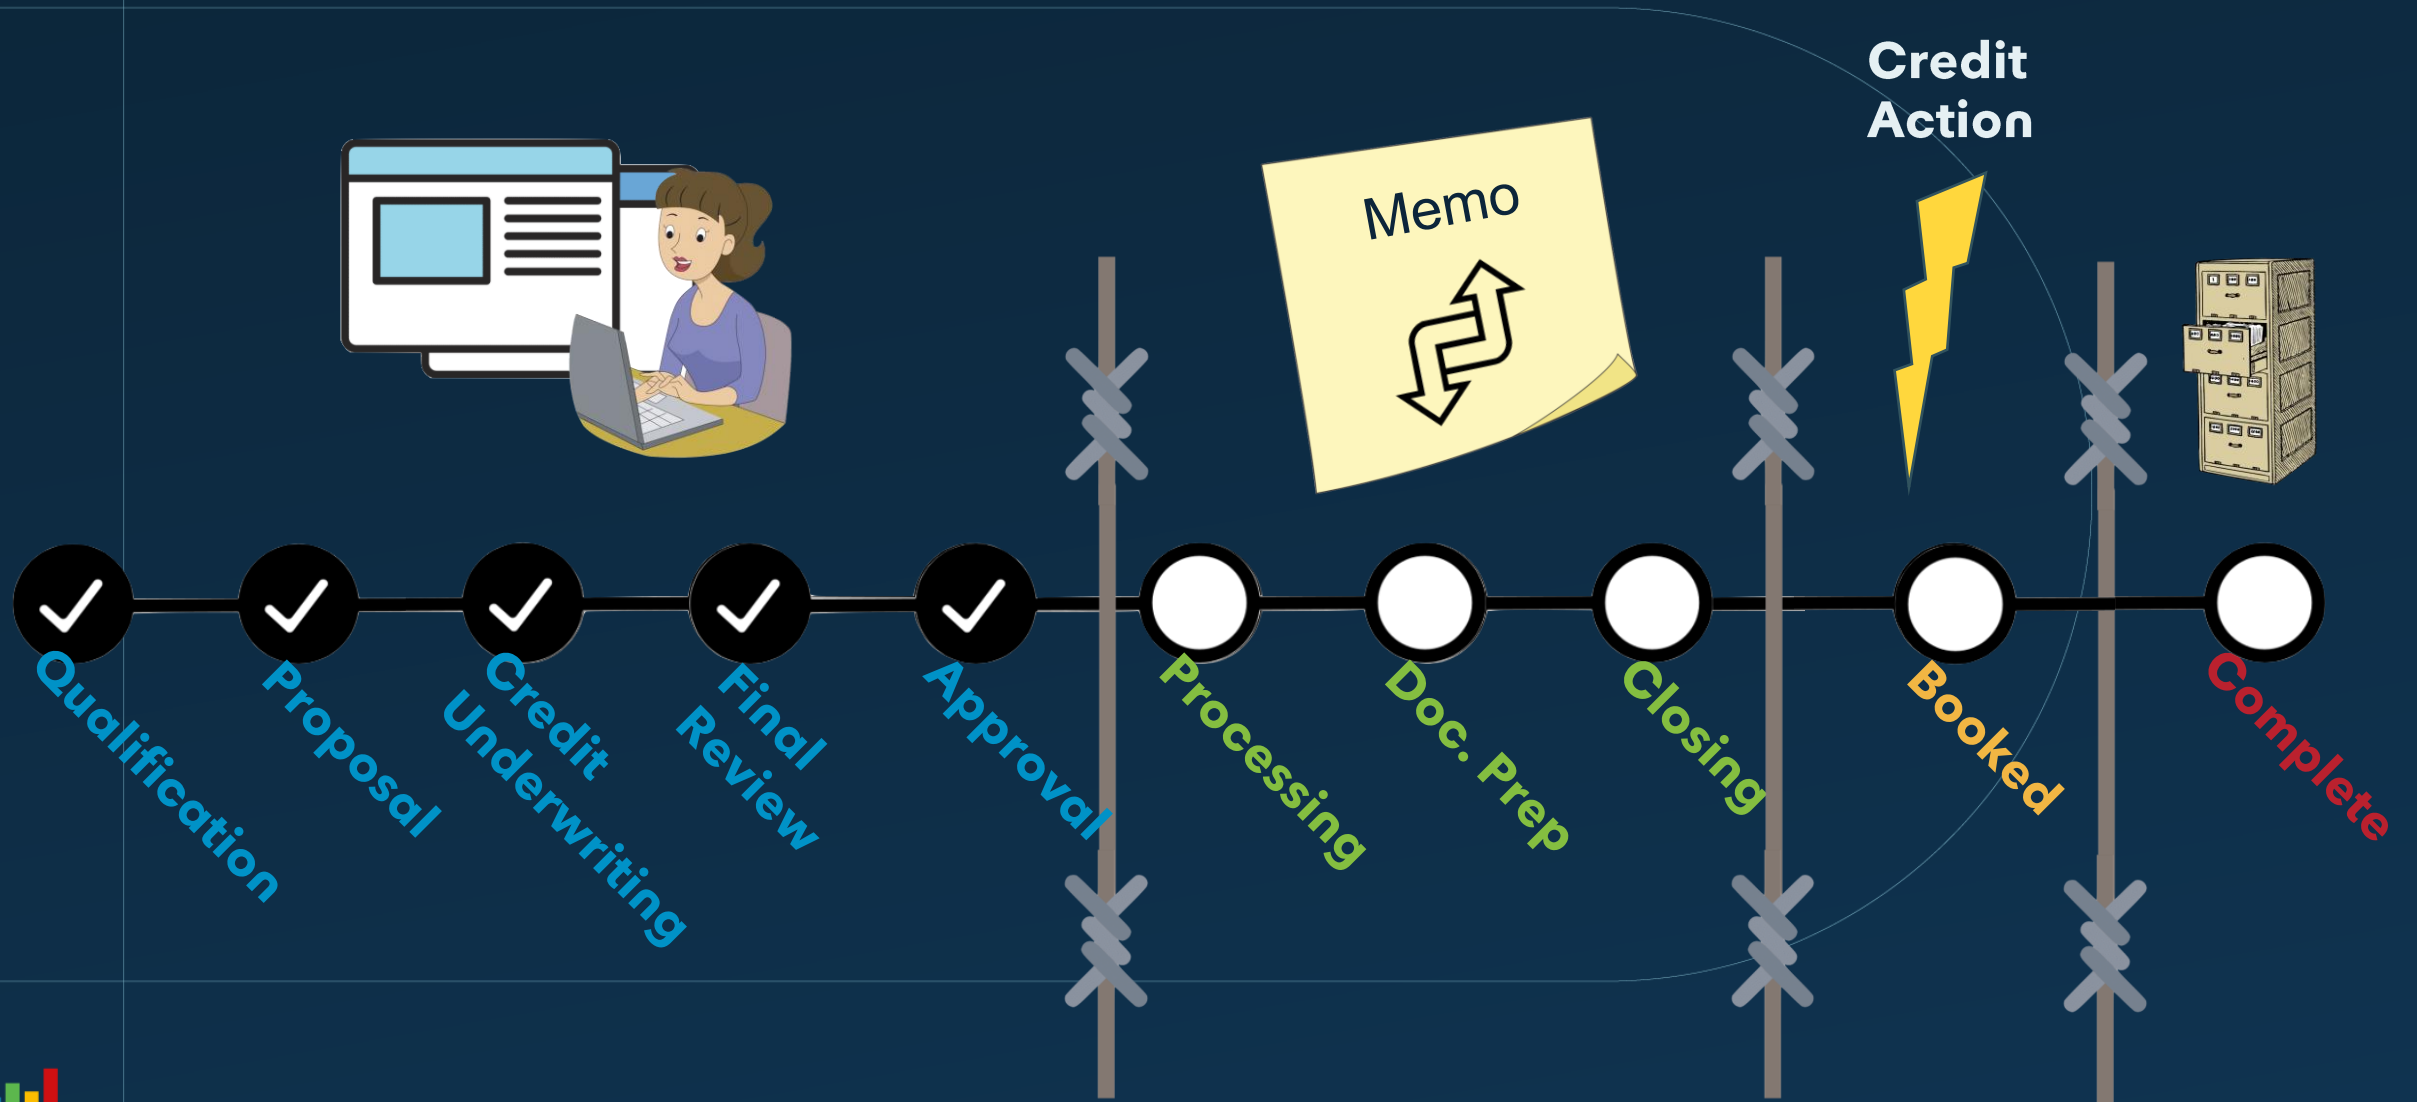

A loan should not move back:

- Once the loan is in the Booked or Complete stage.
- Once the loan has been approved.
- Once the loan has been marked as a Complete Application.

Note: Moving back should be an exception and not the rule.

Updating a Loan in Different Stages

Memo

- ☒ Memo Details
- ☒ Information
- ☒ Requires Approval
- ☐ Does Not Require Approval
- ☐ Modification Description

Loan Fields

Memo Overview

The Memo feature, formerly known as Change Memo, is a tool in the loan interface.

A memo is used to track changes on a loan record and, if configured to do so, can auto apply a specified set of changes to the loan record when the memo is submitted and approved.

A memo holds the original values and the proposed changes along with fields to track the date, time, and the status of the changes.

This enhances auditing and tracking for Regulation B purposes.

Only one memo can be in progress on a loan at a time.

Memo Functionality

• Uses different memo types, including Change Memo, Counter Offer, Contingent Approval, and Original.

• Indicates a list of categories that are included in the memo. For example Loan Term Change, Loan Amount Change, and Life Insurance Change.

• Specifies a set of fields on a loan that are associated with each category.

• Captures the current and proposed value for the fields in the selected categories.

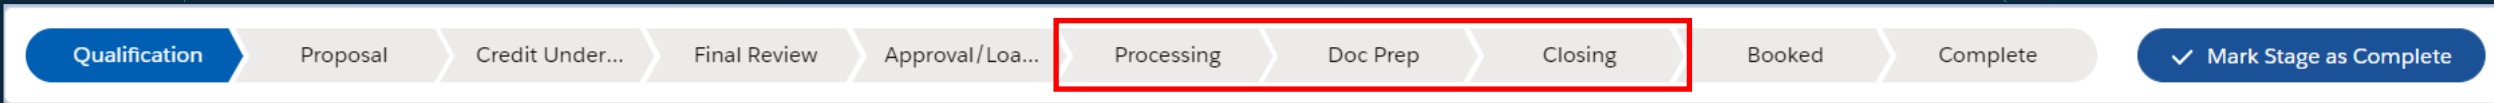

• Applies the proposed field values to the loan when the memo is approved—if no categories require approval, the changes are applied immediately.

• Routes the approval process differently, depending on the memo type and the categories selected.

Memo Use Scenarios

The most common use case for the memo is as a Change Memo.

A Change Memo is used to document changes to a loan that occur post approval, but prior to booking.

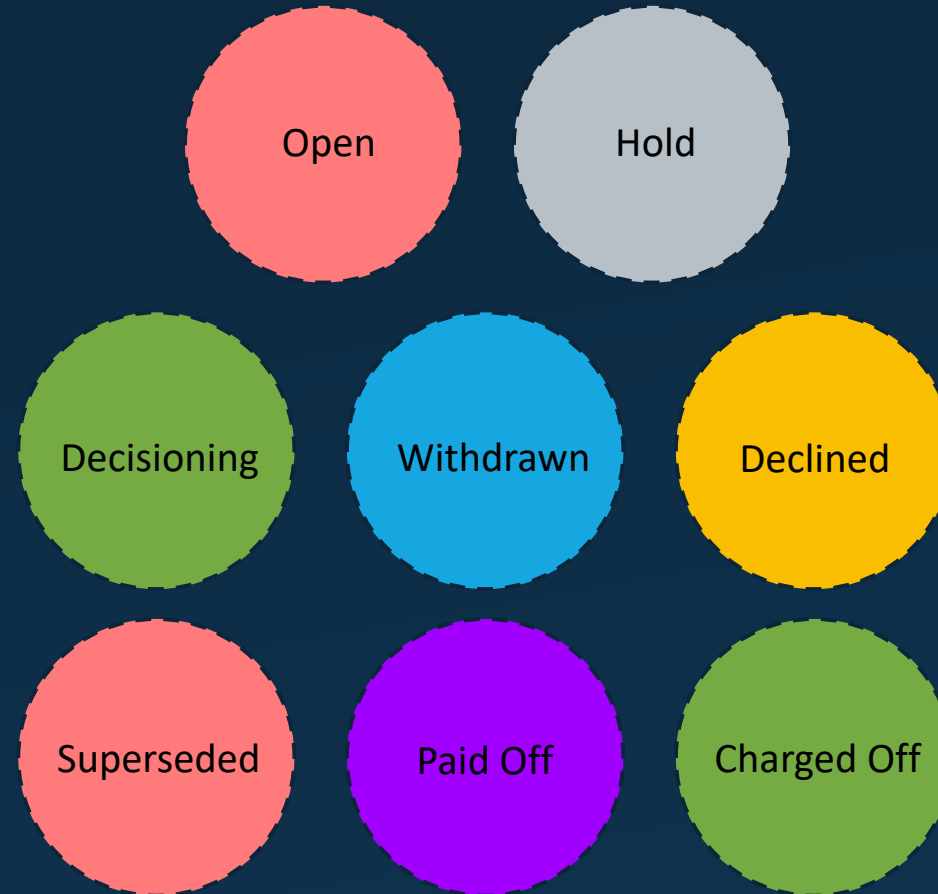

Changes can be documented in the Change Memo and can be automatically updated upon approval.

Loan Statuses: Overview

nCino's **Loan Status** field is an attribute used to further classify a loan's state in the business process.

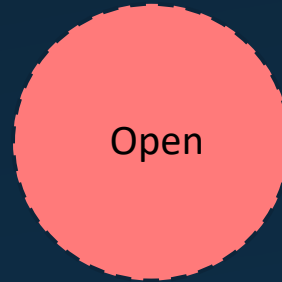

nCino uses the following loan statuses:

Loan Statuses: Overview

nCino's **Loan Status** field is an attribute used to further classify a loan's state in the business process.

nCino uses the following loan statuses:

The Open status indicates that the loan is “In process” and currently being worked/serviced as part of an active loan portfolio.

The loan is not paid off or charged off but is available for action (renewal or modification).

Loan Statuses: Overview

nCino's **Loan Status** field is an attribute used to further classify a loan's state in the business process.

nCino uses the following loan statuses:

Hold

The Hold status is often used to indicate that the loan is in process but cannot be moved forward. This is often due to an incomplete credit application or missing documentation.

Loan Statuses: Overview

nCino's **Loan Status** field is an attribute used to further classify a loan's state in the business process.

nCino uses the following loan statuses:

The Decisioning status indicates that the loan is actively being reviewed by a credit approver.

Loan Statuses: Overview

nCino's **Loan Status** field is an attribute used to further classify a loan's state in the business process.

nCino uses the following loan statuses:

Withdrawn

The Withdrawn status indicates that the borrower no longer wishes to proceed with his/her credit application.

Loan Statuses: Overview

nCino's **Loan Status** field is an attribute used to further classify a loan's state in the business process.

nCino uses the following loan statuses:

The Declined status indicates that the bank has decided not to extend credit to the borrower.

Declined

Loan Statuses: Overview

nCino's **Loan Status** field is an attribute used to further classify a loan's state in the business process.

nCino uses the following loan statuses:

The Superseded status indicates that the booked loan was modified or renewed. The new modification or renewal has replaced the previous loan.

Superseded

Loan Statuses: Overview

nCino's **Loan Status** field is an attribute used to further classify a loan's state in the business process.

nCino uses the following loan statuses:

The Paid Off status indicates that the customer has repaid the entire principal balance of the loan plus any applicable interest. Therefore, the bank no longer needs to service the loan.

Paid Off

Loan Statuses: Overview

nCino's **Loan Status** field is an attribute used to further classify a loan's state in the business process.

nCino uses the following loan statuses:

The Charged Off status indicates that the loan is in default and the bank has ceased attempts to reclaim the funds.

Charged Off

Product State Configuration (PSC): Overview

Product State Configuration is a tool that maps custom stage and status values to the standard Booked and Closed values.

This tool is important because nCino runs logic that checks for the Booked loan stage.

Without Product State Configuration, one needs to write custom code in order to handle non-standard nCino stages and statuses.

PSC: How does it Work?

Product State Configuration records are created on the Product Type object.

The Product State Configuration object monitors opportunity history.

If Product State Configuration finds a loan in a stage that has been mapped to the standard nCino Booked or Closed stages, then it recognizes that loan as booked and populates the background **Booked Date** and **Closed Date** fields with the current date.

The screenshot shows the nCino Product State Config interface. At the top, there's a search bar and navigation tabs. Below, a table lists 5 items, sorted by Product State Config Name. The table has columns for Product State Config Name, Is Booked, Is Closed, Stage, Status, and Stage and Status. Each row has a checkbox in the first column.

	PRODUCT STATE CONFIG NAME ↑	IS BOOKED	IS CLOSED	STAGE	STATUS	STAGE AND STATUS
1	☐ P-0000000000	☒	☒	Booked	Open	Booked Open
2	☐ P-0000000002	☒	☒	Booked	Open	Booked Open
3	☐ P-0000000003	☒	☒	Booked	Open	Booked Open
4	☐ P-0000000004	☒	☒	Booked	Open	Booked Open
5	☐ P-0000000006	☒	☒	Closed/Funded	Open	Closed/Funded Open
